### *Rhino Fiber Can Help Contribute Toward LEED Points*

### *Earn up to 2 LEED points on projects seeking USGBC Certification*

Here's how:

Rhino Fiber is 100% recyclable and is manufactured completely from reclaimed paper. For projects seeking LEED Certification, MR Credit 2 requires that a certain amount of disposable products used on the job must be diverted toward recycling. Since Rhino Fiber is 100% recycled, then all of it can be diverted to recycling. This significantly increases the amount of disposable material on the job diverted to recycling, thereby helping to gain up to 2 extra LEED points.

See USGBC's "LEED for New Construction and Major Renovation" below:

\*MR Credit 2 - Construction Waste Management

Requirements:

Recycle and/or salvage nonhazardous construction and demolition debris. Develop and implement a construction waste management plan that, at a minimum, identifies the materials to be diverted from disposal and whether the materials will be sorted on-site or comingled. Excavated soil and land-clearing debris do not contribute to this credit. Calculations can be done by weight or volume, but must be consistent throughout. The minimum percentage debris to be recycled or salvaged for each point threshold is as follows:
